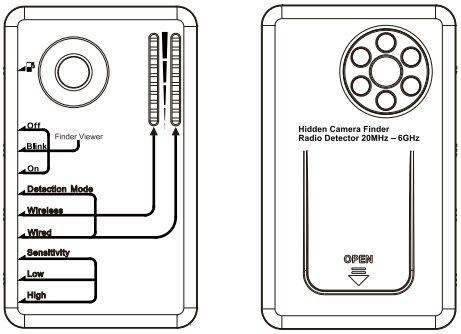
RD-30

RF Detector
Wired Camera Detector
Wireless Camera Detector

Features

- Find wired hidden camera even when its power is off
- Can be used as wireless audio bugs sweeper
- 4 sections of light scale to show relative RF signal strength
- Sensitivity adjustment to narrow down the target easily
- Vibration detection mode for complete discreet operation
- Finder Viewer to uncover pinhole camera
- Extremely small pocket-sized and light-weighted model
- 20MHz to 6GHz wide scanning range
- Detect both wireless and wired signals
- Utilize AAA battery, easy to get anywhere

Product Sketch



Introduction

This extremely small model is used heavily to all levels of law enforcement, private investigators and for personal use for people that demand to have privacy in their lives!

RD-30 detects wired and wireless audio and video devices with frequencies between 20MHz - 6GHz.

On the back side of this detector, you will find red LED lights that flash intermittently.
Looking through the eyepiece, you can see anything that reflects light back to you.

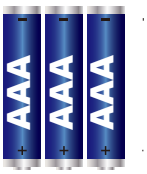
If there is a hidden wired or wireless spy camera, even the size of a tiny pinhole, it will reflect light back to you and you can easily locate the hidden camera source even if the camera is powered off!

Specification

Item Number	RD-30
Battery Type	AAA Battery
Frequency Range	20MHz - 6GHz
Dimension	80x52x15.5mm
Weight	74g (without battery)

※Specifications are subject to change without prior notice.

Standard Accessories



AAA Battery*3

Quick Guide

CE/FCC Certified
